

KHENI DENTAL
ELITE IMPLANT CENTER

The photographs we need from *the clinic*

A shot list for the website. Everything here can be taken on a modern phone in about two hours across the two clinics. No photographer, no studio, no closing early.

6

Pictures on the site right now that are not your clinic. These matter most.

18

Empty slots already built and waiting for a real photograph.

2 hrs

Roughly what the whole list takes, both branches included.

PREPARED 19 SEPTEMBER 2026

WWW.KHENIDENTALCARE.COM

PLEASE READ THIS PART FIRST

Six pictures on your website are not your clinic

When the site was built, some photographs were not available yet, so computer-generated stand-ins were used to finish the layouts. They were always meant to be temporary.

Six of them are still there, and they are the ones that matter, because they are captioned as **your rooms**. The waiting area shown at Yogi Chowk has teal armchairs, a terrazzo table and a tropical plant. It is a nice room. It is not your room.

This is worth fixing before advertising starts, for three plain reasons: a patient who arrives expecting that room and finds a different one starts the visit already unsure; Google Ads can treat a landing page that misrepresents a business as a policy problem; and your actual clinics look good, so there is nothing to gain by hiding them.

The good news

Every one of these slots is already built and sized on the website. Send the photographs and they drop straight in. Nothing needs redesigning, and no page changes shape.

BEFORE YOU START

How to take them

A phone from the last few years is genuinely fine. These eight habits matter far more than the camera.

Daylight, lights on

Shoot in the morning or late afternoon with blinds open and the room lights on. Never use the phone flash.

Tidy first, then shoot

Clear cups, papers, cables, bins and personal items. Thirty seconds of tidying beats any editing.

Stand in the corner

For a room, stand in a corner and shoot across it. You get the whole space rather than one wall.

Send as files, not photos

On WhatsApp choose *Document* rather than *Gallery*. Sending as a photo shrinks it badly.

Hold it level

Phone upright, roughly chest height, back straight. Tilting up or down makes rooms look smaller than they are.

Landscape for rooms

Turn the phone sideways for rooms and buildings. Keep it upright only for people.

No filters, no beauty mode

Send the original file. Filters and skin smoothing are obvious on a dental website and cost trust.

Take three of each

Two steps left, two steps right. It costs nothing and one is always better than the others.

On patients: nobody needs to appear in any photograph on this list. Where a person helps, a staff member works perfectly. If a patient is ever in a picture, we need their written permission first, and no faces are needed for anything here.

Your six rooms

These replace the generated pictures. Take them first.

1

Yogi Chowk waiting area

Landscape · Swastik Plaza Ground

REPLACING A FAKE

ON THE SITE NOW

Teal armchairs, terrazzo table, tropical plant, a tree outside the window. Generated.

WHAT WE NEED

Your waiting area exactly as a patient sees it when they sit down.

HOW TO SHOOT IT

- Stand at the entrance looking in
- Phone sideways, chest height
- Include the seating and any window
- Three versions from slightly different spots

TIDY FIRST

- Straighten the chairs
- Clear cups, bags and papers
- Bin out of shot
- Lights on even in daytime

2

Yogi Chowk treatment room

Landscape · the room a family is usually seen in

REPLACING A FAKE

HOW TO SHOOT IT

- From the doorway, across the room
- Chair, light and any screen in frame
- Blinds open if there is a window

TIDY FIRST

- Chair upright and clean
- Tray covered or cleared
- Cables tucked away
- No used instruments visible

3

Yogi Chowk children's corner or low basin

Landscape or upright · whatever you actually have

REPLACING A FAKE

The site currently shows a child-height basin with a step stool and a green towel. If you have something for children, photograph that. If you do not, tell us and we will remove the claim rather than invent one.

4

Hirabaug treatment room

Landscape · Varachha Main Road

REPLACING A FAKE

HOW TO SHOOT IT

- Same approach as the Yogi Chowk room
- From the doorway, across the room

TIDY FIRST

- Same checklist as above

5

Hirabaug reception counter

Landscape · the first thing a patient reaches

REPLACING A FAKE

HOW TO SHOOT IT

- From where a patient walks in
- Counter and anyone behind it
- Staff member is welcome, no patients

TIDY FIRST

- Clear the counter top
- Registers and files out of shot
- No screens showing patient names

6

Sterilisation area and sealed pouches

Landscape · either clinic

REPLACING A FAKE

The website tells patients instruments are sterilised under pressure and kept in sealed pouches. A real photograph of your autoclave and a row of dated pouches is one of the most reassuring pictures a dental website can carry, and almost no competitor in Surat shows it.

TWO SHOTS PLEASE

- The autoclave, door closed, in its corner
- Close up of sealed pouches, dates visible

TIDY FIRST

- Wipe the surface
- Pouches lined up neatly

PRIORITY TWO · EMPTY SLOTS ON THE SITE

Finding the door, and what you work with

7

Both clinic exteriors

Landscape · one for each branch

WOULD IMPROVE THE SITE

This is the single most useful photograph on the list and the site has no slot for it yet, so we will build one. A first-time patient in an autorickshaw is looking for a door, not an address. Show them the door.

YOGI CHOWK

- Stand across the road
- Include the building and signboard
- Enough of the street to recognise it

HIRABAUG

- Show the entrance above Shiv Plywood
- Signboard readable
- Daylight, not evening

ALSO TELL US

1. Any landmark people use to find you, in the words locals use
2. Where a patient parks, and whether there is a lift

Upright or square · one photo each

The technology page lists twelve things with no picture of any of them. Most Surat clinics list the same words. Photographs of the actual machines in your actual rooms is the difference between a claim and proof.

PHOTOGRAPH

AND TELL US THE MAKE AND MODEL

Digital X-ray unit	Brand and model on the label
Intraoral scanner	Brand and model
Intraoral camera	Brand and model
Dental microscope	Brand and model
Rotary root canal system	Brand and model
Apex locator	Brand and model
Dental laser	Brand, model, and what you use it for
Implant planning software	Which software
Guided implant kit	Which system
Autoclave	Brand, model, class
Ultrasonic scaler	Brand and model
CAD/CAM restorations	Which lab partner, in-house or sent out

WHY THE MODEL MATTERS

1. It lets the website say "a Carestream digital X-ray" rather than "digital X-ray", which reads as a fact instead of a boast
2. Patients comparing clinics search these names
3. We will never publish a brand you have not confirmed

9

Six treatment photographs

Landscape · objects and rooms, no mouths

SLOT BUILT, EMPTY

Six treatment pages have no picture. These are simple still photographs of things on a clean surface by a window, or the corner of a room. No patients involved.

NEEDED

- Root canal treatment
- Teeth whitening
- Dentures
- Kids dentistry
- Smile design
- Full mouth rehabilitation

WHAT WORKS

- The kit for that treatment laid out neatly
- A denture or model on a clean surface
- The corner of the room it happens in
- Shade guide, whitening trays, a study model

PRIORITY THREE · MAKES THE SITE FEEL LIKE A REAL PLACE

People at work, and results

10

Each dentist at work

Upright · one per dentist

WOULD IMPROVE THE SITE

We have the four standing portraits, and they are good. A second photograph of each dentist actually doing something, looking at a screen, explaining a scan, writing notes, makes a profile page read as a person rather than a staff card. Dr. Mayur already has his.

STILL NEEDED

- Dr. Jinali Monpara
- Dr. Ishita Dobariya
- Dr. Parita Vastarpara

WHAT WORKS

- At the screen looking at an X-ray
- At the desk, mid-conversation
- Not looking at the camera

11

A team photograph with all four dentists

Landscape

IMPROVES WHAT WE HAVE

The one we have shows Dr. Mayur and Dr. Jinali with two of the team, so the website has to call it "the clinic team" rather than name everyone. One frame with all four dentists and the staff lets the page say what it wants to say.

Matched pairs · the highest value thing on this list

Nothing persuades a patient considering implants or braces like seeing finished work. The gallery page is built and waiting. Four to six cases would fill it properly.

SHOOTING THE PAIR

- Same angle, same distance, same light
- Same retractors both times
- Change only the mouth, never the camera
- Send the originals, not screenshots

GOOD SPREAD

- One or two implant cases
- One full mouth rehabilitation
- One braces or aligner case
- One crown or smile design

FOR EVERY CASE, WE NEED

1. Written permission from the patient to publish the photographs
2. What they came in with, one line
3. What was done, one line
4. How long it took, and when the "after" was taken
5. Which photo is the before and which is the after, clearly labelled

A note on the ortho case already sent: the two halves appear to be labelled the wrong way round. The one marked "after" has crowded lower teeth and the one marked "before" has them straight. Please confirm which is which before we publish it.

NOT PHOTOGRAPHS

Six things written down

These are holding the website back more than any picture. Each one is a sentence or a document, not a job.

WHAT

WHY IT IS NEEDED

Dental council registration certificates

All four dentists

The site currently shows registration numbers A-6277 and A-15753 that nobody has verified. A wrong number published against a named dentist is worse than no number. Send the certificates or we remove the numbers and keep the qualifications.

Memberships

IDA, VDA, KDA

Listed on the site, unconfirmed. Confirm which dentist holds which, or they come off.

Implant warranty, in writing

The form said "lifetime warranty implant". We need the actual terms, including what happens to the crown on top, before the site or any advertisement mentions a warranty.

Twelve aftercare guides

A doctor must read these

The site publishes aftercare advice for extractions, implants, scaling, crowns, braces, aligners, retainers, children's brushing and out-of-hours. The wording is careful and general, but it is not yours. A patient who has just had a tooth out will read it as instructions from their dentist. Dr. Mayur should approve or correct each one.

Six real patient quotes

Or permission to remove the section

The reviews page carries six written testimonials that were placeholders and read as real. Either six genuine consented quotes, or we take the section down. Your Google reviews stay either way.

Confirm the Google numbers

The site says 4.9 across 1,971 reviews, 1,761 at Yogi Chowk and 210 at Hirabaug. Please open both listings and confirm the current figures.

The whole list on one page

Do these first

- | | |
|--|--|
| ☐ Yogi Chowk waiting area | ☐ Hirabaug reception counter |
| ☐ Yogi Chowk treatment room | ☐ Autoclave, door closed |
| ☐ Yogi Chowk children's area or low basin | ☐ Sealed pouches, dates visible |
| ☐ Hirabaug treatment room | |

Then these

- | | |
|---|--|
| ☐ Yogi Chowk exterior and signboard | ☐ Dentures |
| ☐ Hirabaug exterior and signboard | ☐ Kids dentistry |
| ☐ Twelve equipment photos, with makes and models | ☐ Smile design |
| ☐ Root canal treatment | ☐ Full mouth rehabilitation |
| ☐ Teeth whitening | |

When you can

- | | |
|---|---|
| ☐ Dr. Jinali at work | ☐ Team photo, all four dentists |
| ☐ Dr. Ishita at work | ☐ Four to six before and after cases |
| ☐ Dr. Parita at work | ☐ Patient permission for each case |

Written, not photographed

- | | |
|--|--|
| ☐ Four registration certificates | ☐ Six patient quotes, or remove |
| ☐ Memberships confirmed per dentist | ☐ Google review numbers confirmed |
| ☐ Implant warranty terms | ☐ Which ortho photo is before |
| ☐ Twelve aftercare guides approved | ☐ Parking and lift, per branch |

How to send everything

WhatsApp is fine. Choose **Document** rather than **Gallery** so the files keep their full size, and name them as you go, for example *yogi-waiting-1.jpg*. If it is easier, put everything in one Google Drive folder

and share the link. Partial is welcome: send the six room photographs on their own and they go live the same day.
